ASTHMA CASE MANAGEMENT

School-based Asthma Management (SAM) is a comprehensive school-community process designed to coordinate asthma case management training for school nurses in the Delta. This model is based on the Healthy Learner Asthma Initiative originally developed in the Minneapolis Public Schools. The goal of this program is to improve the coordination of care for children with asthma. SAM is built on the premise that children with asthma can stay healthy, stay in school, be academically successful and avoid unnecessary emergency department visits and hospitalizations for asthma.

Target Population:

SAM's target population consists of school nurses, identified by the Mississippi Department of Health, serving children ages 5 to 14 in the Mississippi Delta. This includes 14 counties and 31 school districts.

SAM's design incorporates seven components that link health and education. This design assists in establishing a framework to guide health services in the school setting for children with asthma.

The seven components are as follows:

- ◆ Leadership
- ◆ Evidence-based practice
- ◆ Capacity building
- ◆ Asthma Resource Nurse
- ◆ Healthy Learners
- ◆ Partnership with families
- ◆ Partnership with healthcare providers

DO YOU KNOW YOUR ASTHMA TRIGGERS?

According to the Environmental Protection Agency (EPA), the following, among others, may trigger an asthma attack.

- Secondhand Smoke
- Cockroaches
- Pet Dander
- Mold
- Outdoor Pollution
- Dust Mites
- Pollen
- Cold Air
