The Bachelor of Applied Science in Geospatial Analysis and Intelligence (BAS-GAI) focuses on the use of GIS, remote sensing, positioning and survey systems, geo-visualization, and analytic techniques to provide a well-rounded base which aligns with industry needs.

The degree is a 62-semester hour program of study to provide students with the broad range of knowledge and skills needed to work across the full spectrum of geospatial jobs and/or to compete successfully in top-ranked graduate programs.

Geospatial intelligence and analysis explores the impact of human and natural activities on Earth using the exploitation and analysis of imagery and geospatial information in a way that describes, assesses, and visually depicts physical features and geographically referenced activities. GEOINT is not only a distinct intelligence discipline practiced by the intelligence community and military, but a core activity used within the utilities, oil and gas pipeline, emergency preparedness, healthcare, and business sectors. It is one of the 15 fastest growing career opportunities in the United States.
