

TANNER B. OVERCASH

Corporal, United States Marine Corps

Geospatial / All Source Analyst – Geospatial Technician

Dear Hiring Manager,

My name is Tanner Overcash. I am a Geospatial Analyst for the United States Marine Corps Reserves as well as a Geospatial Technician for Delta State University. I am looking for a civilian occupation that can both utilize the skills I've learned through training and experience in the Marine Corps as well as further my education and career as an Analyst. My resume contains a detailed description of my skill sets which align perfectly with the open position that you've listed. If you are looking for a candidate who is dedicated to protecting American interests and securing our Nation's interests, as well as dedicated to furthering themselves both professionally and intellectually, than please consider what I have to offer.

I hold a current TS/SCI clearance, I have nearly three years of experience as an analyst, I am willing to move to any location, and I am looking for a salary equal to or in excess of \$35,000 a year.

In reviewing my resume, you will note that I have a certification from the National Geospatial Intelligence Agency (NGA) in Geospatial Analysis with experience with imagery analysis, collection management, commercial imagery collection, and Geospatial Intelligence (GEOINT) methodologies. My primary experience utilizes ESRI GIS software product. I've supported operations at both the federal level (USMCR, FEMA) and the state level (Mississippi Department of Agriculture). My background includes using spatial thinking to overcome problems presented to me, utilizing all resources available to complete tasks in a timely manner, as well as collecting and disseminating large volumes of data from a multitude of different sources, both commercial and federal. I have experience briefing high profile individuals in a multitude of different formats and used both commercial and military remote sensing techniques to perform a wide array of tasks.

I have been previously tasked by both the Marine Corps and the G2 for Southern Command to analyze data, develop methods to create products, then create and brief to senior level military and civilian personnel. I have been enabled with the skills and capabilities to bring a strong interdisciplinary approach to your organization. I am a critical thinker, multi-task oriented, and wholeheartedly love a challenge.

Furthermore, I am unique because of my steadfast desire to improve myself. I am in the process of obtaining a Bachelor of Applied Science in Geospatial Analysis and Intelligence and will continue to further my education. I have prepared reports multiple times for both pre and post mission briefs, acted as a liaison between rotations during activations for the Marine Corps, and have helped to identify and recommend solutions to analytical problems and disseminating intelligence products using prescribed methods. I hope to be a key player for your team.

Sincerely,

Tanner B. Overcash
