## To Whom It May Concern:

I am 27 years old and am currently enrolled as a Graduate Student in Geospatial Information Technologies at Delta State University in Cleveland, MS. This is where I also spend my time as a Geospatial Technician and Graduate Assistant in the DSU GIT Center.

My objective is to graduate and enter the workforce as a Geospatial Professional, preferably where my skills overlap with my scientific interests.

My interests within GIS are those of Ecological Forecasting, Alternative Energy, and general Environmentalism.

My strengths include Research and Analytics, and I am also proficient in several different GIS software suites, such as those under the banner of ESRI and ArcGIS. I am also well-versed in Open Source mediums, such as OpenStreetMap.

A highlight of my Geospatial experience has been my work with the Delta State GIT Center, finalizing edits on MTM 50 maps for the National Geospatial-Intelligence Agency that get distributed for use within the United States Department of Defense.

My experience in other fields, such as journalism and counseling, have honed my abilities as a leader, managing teams, training personnel, and encouraging individuals so as to achieve tasks that have been assigned to the utmost quality.

I believe that my experience and education are valuable assets to any potential team that seek to undergo or integrate GIS tasks into their current workflow.

I am a reliable, level-headed, and motivated individual that desires to use GIS to make the world a better place.

Thank you for reviewing my credentials, and for expressing interest in me as a candidate.

Regards,

**Austin Flint**
